

1. Double Integration

05 February 2024 10:16

AREA

$$\int_a^b f(x) dx$$

$$\int_c^d \int_a^b dx dy$$

$$\int_c^d \int_a^b \underbrace{f(x,y)}_{\text{height}} \underbrace{dx dy}_{\text{Area}} \rightarrow \text{Volume}$$

$$x: a \rightarrow b$$

$$y: f(x) \rightarrow g(x)$$

NOTE: Double Integration Rules

- Inner integration first, then outer; inner operator corresponds to inner integral
- Constant limits \rightarrow outer integral
- Variable limits \rightarrow inner integral
- You cannot have both limits to be variable limits.

EXAMPLES

$$y: 0 \rightarrow 4$$

$$x: 0 \rightarrow 2$$

$$\text{Area under curve} = \int_0^2 \int_0^{x^2} dy dx$$

[OR]

$$x: 0 \rightarrow 2$$

$$y: 0 \rightarrow x^2$$

$$\text{Area under the curve} = \int_0^2 \int_0^{x^2} dy dx$$

$$x \text{ w/ constant limits}$$

$$x: 0 \rightarrow 1$$

$$y \text{ w/ constant limits}$$

$$y: 0 \rightarrow 1$$

x by constant limits

$$x: 0 \rightarrow 1$$

$$y = x^2 \rightarrow x$$

y by constant limits

$$y = 0 \rightarrow 1$$

$$x = y \rightarrow \sqrt{y}$$
